

Knime - Assignment 1

1) Read the adult.csv file available in the **data** folder on the KNIME Hub. The data are provided by the **UCI Machine Learning Repository**.

2) Calculate the count and average age of women with income >50K

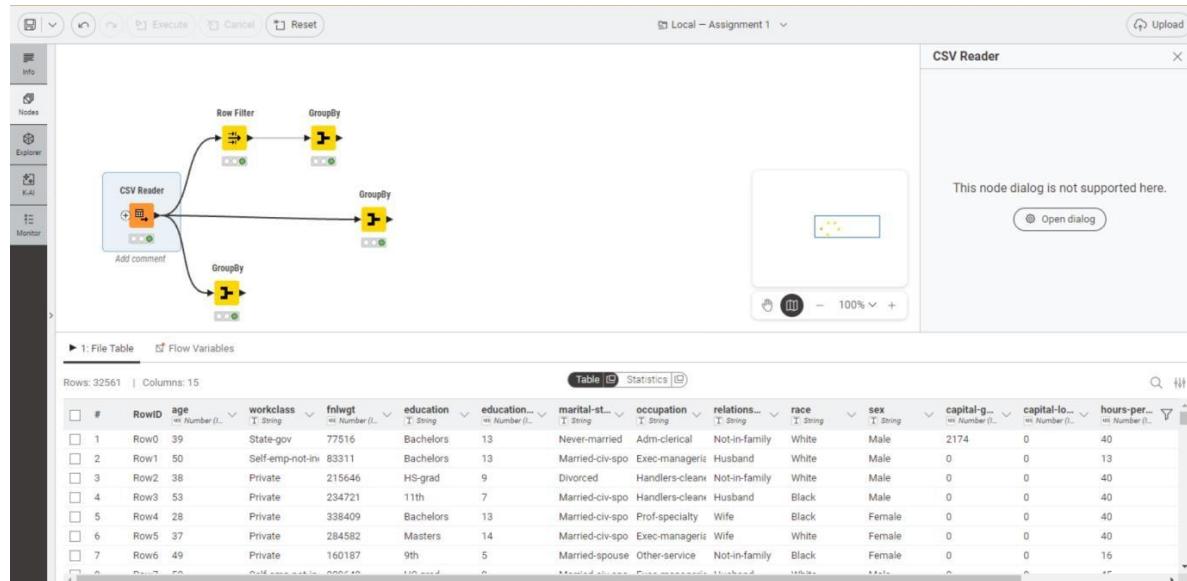

3) Calculate the averages of all numerical columns for each one of the 4 groups defined by sex and income values

4) Calculate

- the number of missing values in the occupation column
- the number of non-missing rows in the occupation column
- the number of rows in the occupation column
- the number of rows in the marital-status column

Notice that the last two aggregations should provide the same numbers!

Step 1: Read CSV File “adult.csv”

The screenshot shows a KNIME workflow interface. On the left, there's a vertical toolbar with icons for Info, Nodes, Explorer, KAI, and Monitor. The main workspace contains a 'CSV Reader' node connected to a 'Row Filter' node, which then connects to two 'GroupBy' nodes. One 'GroupBy' node has a feedback loop pointing back to the 'Row Filter'. The other 'GroupBy' node also has a feedback loop. A third 'GroupBy' node is positioned below the first two. To the right of the workspace is a 'CSV Reader' node dialog, which is closed. Below the workspace is a 'File Table' view showing the first 10 rows of the 'adult.csv' dataset. The table has 15 columns: #, RowID, age, workclass, fnlwgt, education, education-num, marital-status, occupation, relations, race, sex, capital-gain, capital-loss, hours-per-week, and class. The 'class' column is currently hidden.

#	RowID	age	workclass	fnlwgt	education	education-num	marital-status	occupation	relations	race	sex	capital-gain	capital-loss	hours-per-week	class
1	Row0	39	State-gov	77516	Bachelors	13	Never-married	Adm-clerical	Not-in-family	White	Male	2174	0	40	<=50K
2	Row1	50	Self-emp-not-inc	83311	Bachelors	13	Married-civ-spouse	Exec-managerial	Husband	White	Male	0	0	13	>50K
3	Row2	38	Private	215646	HS-grad	9	Divorced	Handlers-cleaner	Not-in-family	White	Male	0	0	40	<=50K
4	Row3	53	Private	234721	11th	7	Married-civ-spouse	Handlers-cleaner	Husband	Black	Male	0	0	40	<=50K
5	Row4	28	Private	338409	Bachelors	13	Married-civ-spouse	Prof-specialty	Wife	Black	Female	0	0	40	<=50K
6	Row5	37	Private	284582	Masters	14	Married-civ-spouse	Exec-managerial	Wife	White	Female	0	0	40	<=50K
7	Row6	49	Private	160187	9th	5	Married-spouse-absent	Other-service	Not-in-family	Black	Female	0	0	16	<=50K
8	Row7	50	Govt-work	200540	11th	6	Married-spouse-absent	Prof-specialty	Wife	White	Female	0	0	40	<=50K
9	Row8	46	Private	200540	HS-grad	9	Married-spouse-absent	Prof-specialty	Wife	White	Female	0	0	40	<=50K
10	Row9	54	Private	200540	HS-grad	9	Married-spouse-absent	Prof-specialty	Wife	White	Female	0	0	40	<=50K

Power Bi Assignment - 1

Step 2: Filter Row for Women with income >50K

The screenshot shows a KNIME workflow titled "Local - Assignment 1". The workflow starts with a "CSV Reader" node, followed by a "GroupBy" node. The output of this groupby is then connected to a "Row Filter" node. The "Row Filter" node has a configuration dialog open, showing a single criterion: "Filter column: sex" and "Operator: Equals" with the value "Female". The output of the "Row Filter" node is then connected to another "GroupBy" node, which finally connects to a third "GroupBy" node. The final output of the third "GroupBy" node is displayed in a "Table" view, showing the following data:

workclass	fnlwgt	education	education-num	marital-status	occupation	relations	race	sex	capital-gain	capital-loss	hours-per-week	native-country	income
Private	45781	Masters	14	Never-married	Prof-specialty	Not-in-family	White	Female	14084	0	50	United-States	>50K
Self-emp-not-inc	292175	Masters	14	Divorced	Exec-managerial	Unmarried	White	Female	0	0	45	United-States	>50K
Private	51835	Prof-school	15	Married-civ-spouse	Prof-specialty	Wife	White	Female	0	1902	60	Honduras	>50K
Private	169846	HS-grad	9	Married-civ-spouse	Adm-clerical	Wife	White	Female	0	0	40	United-States	>50K
Private	343591	HS-grad	9	Divorced	Craft-repair	Not-in-family	White	Female	14344	0	40	United-States	>50K
Federal-gov	410867	Doctorate	16	Never-married	Prof-specialty	Not-in-family	White	Female	0	0	50	United-States	>50K
Private	287828	Bachelors	13	Married-civ-spouse	Exec-managerial	Wife	White	Female	0	0	40	United-States	>50K

Step 3: Use GroupBy node to calculate the count and average age of women with income >50K

The screenshot shows a continuation of the KNIME workflow from the previous step. The "CSV Reader" node is connected to a "GroupBy" node. The output of this groupby is then connected to a "Row Filter" node. The "Row Filter" node has a configuration dialog open, showing a single criterion: "Filter column: sex" and "Operator: Equals" with the value "Female". The output of the "Row Filter" node is then connected to another "GroupBy" node. The final output of this "GroupBy" node is displayed in a "Table" view, showing the following data:

#	RowID	Count*(age)	Mean(age)
1	Row0	1179	42.126

Step 4: Use GroupBy node to calculate the average of all numerical column for each of the 4-group defined by sex and income value

#	RowID	sex	income	Mean(age)	Mean(capital-gain)	Mean(capital-loss)	Mean(education-num)	Mean(hours-per-week)
1	Row0	Female	<=50K	36.211	121.986	47.364	9.82	35.917
2	Row1	Female	>50K	42.126	4,200.389	173.649	11.787	40.427
3	Row2	Male	<=50K	37.147	165.724	56.807	9.452	40.694
4	Row3	Male	>50K	44.626	3,971.766	198.78	11.581	46.366

Step 5: Use GroupBy node to calculate Missing value count for occupation, non-missing value count for occupation, no of rows in occupation column, no of rows in martial-status

#	RowID	Missing value count(occupation)	Count(occupation)	Count(occupation)	Count(marital-status)
1	Row0	0	32561	32561	32561
